

DCP007 Industrial Photometer

FEATURES

- Maintenance free
- High performance LED light source
- Real time inline measurement
- Dual wavelength drift free operation
- Light source & wavelength easy to change
- Alarm, 4-20 mA and Modbus TCP communications

The Kemtrak DCP007 process analyzer is a high performance fiber optic coupled photometer for high resolution, real time, inline concentration and color measurement. Environmentally friendly, mercury-free LED light technology assures drift-free operation with exceptionally high precision.

A proprietary dual wavelength four channel measurement technique using an advanced digital electronics design allows deep absorbance measurement to 5AU. A range of shorter optical path-lengths allow for deeper absorbance measurements. Automatic compensation for sample turbidity and/or fouling of the optical windows ensures reliable, long-term operation.

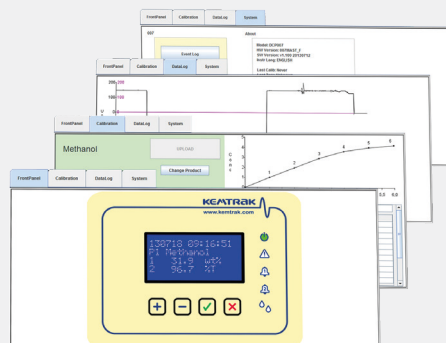

Kemtrak industrial-grade measurement cells with scratch-resistant sapphire windows contain no electronics or moving parts, making them ideal for both ordinary and hazardous area use. A verification and calibration accessory, traceable to NIST standards, is available to ensure measurement confidence while saving valuable time and resources.

Standard features include 16 separate linearization/calibration tables for multiple product operation, remote zeroing, automatic cleaning cycle operation and advanced signal filtering. An on-board graphical internet based configuration utility allows remote operation, calibration, validation, and data trending using a standard PC.

All Kemtrak products are designed to meet the most demanding application specifications and are made from the highest quality materials to ensure exceptionally long life and the highest reliability.
